DETAILED ACTION

Election/Restrictions

This application contains claims directed to the following patentably distinct species of the claimed invention:

Species 1, claims 1-6 and 11-16, are directed to a memory card having a first modular component that comprises a first host interface and a first host interface module; and a device interface module configured to operate a device interface that is coupled to a storage device; wherein the first host interface module is configured to call a function in the device interface module, wherein the first modular component is **replaceable** with a second modular component that comprises a second host interface and a second host interface module, and wherein the second host interface module is configured to call the function in the device interface module.

Species 2, claims 7-10 and 17-24, are directed to a card configured to plug in to a first host or a second host; a first host interface in the card and configured to communicate with the first host; a first host interface module configured to operate the first host interface; *a second host interface in the card and configured to communicate with the second host; a second host interface module configured to operate the second host interface; a device interface in the card and configured to communicate with a storage device; and a device interface module configured to operate the device interface;*

wherein the first host interface module is configured to call a function in the device interface in response to receiving a first command from the first host, and wherein the second host interface module is configured to call the function in the device interface in response to receiving a second command from the second host.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with the requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP 5809.0244.

Should applicant traverse on the ground that the species are not patentability distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the cue. In either instance, if the examiner finds one of the inventions unpatentable over the

Art Unit: 2182

prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
